Nevada Humane Society Now Powered by Solar Energy

Nevada Humane Society is going green, thanks to the recent installation of solar panels and the official transition to solar energy. The project will generate a substantial cost savings on electricity for Nevada Humane Society and is also beneficial for the environment.

“This solar project is a combination of many groups coming together to do something positive for the environment, the local economy, and for homeless pets,” said Bonney Brown, Nevada Humane Society’s Executive Director. “We would like to thank Washoe County, NV Energy, CleanPath, Reno-Tahoe International Airport, and Hamilton Solar for working with Nevada Humane Society to make this dream a reality.”

The panels are now generating power for the 2825 Longley Lane animal shelter. While they do not power the entire facility, they can generate enough to save up to \$18,000 a year for the non-profit organization and there is the potential for future growth to power even more of the facility’s electricity needs.
